THIS WEEK:

# Digital identity

A digital identity is a **collection of information** (example: a profile) created or adopted in cyberspace by an individual, organization or electronic device.

A digital identity arises organically from the use of **personal information** and from the **shadow data** (information that is automatically collected) created by the individual's actions online.

**Examples** of data points that can help form a digital identity include: **username and password, purchasing behavior or history, social security number, medical history**, etc.

# Topics:

1. Building Your Identity
2. Security
3. Safety
4. Sharing
5. Get Connected

# 1

[PRACTICE >>](#)

With **online learning**, it is becoming increasingly important to be aware of your digital identity. Your shopping history, your Google searches, and your Zoom classes may all be linked by the same email or can be traced to the same account, so it is important to think about your actions online.

*Stay Safe!*
