**THIS WEEK:**

# *Educational Technology*

**Educational technology** is a term used to describe a wide array of teaching-and-learning-related software and hardware that's increasingly being used in classrooms.

Educational technology refers to technology that usually helps **facilitate** collaboration in an active learning environment.

The ultimate goal of educational technology (or EdTech) is to **improve learning environments**, which in turn is meant to **boost student outcomes**. It has also been proven to increase **student engagement** and **participation** in class.

# Topics:

1. Introduction
2. The Relationship
3. EdTech for Teaching
4. EdTech at Home
5. Resources

EDUCATION

You may have a love-hate relationship with technology. On one hand, you might like the old-school pencil and paper, face-to-face communication. On the other hand, you might also like the different forms of technology that are visually impressive and extremely convenient. So instead of pretending to embrace every new trend wholeheartedly without question, it is good to approach things more cautiously. So with this week's Survival Guide we hope you were able to learn more about what Educational Technology can mean to your family.
