**THIS WEEK:**

# *Water Day / Earth Hour*

**"World Water Day** is held annually on 22 March as a means of focusing attention on the importance of freshwater and advocating for the sustainable management of freshwater resources."

"Every year, at 8:30 pm on the last Saturday of March, millions of people across the world join in raising awareness of the issues facing our planet - known as **Earth Hour**. But Earth Hour is more than just an Hour for the planet - it's a movement for our future."

Water Day and Earth Hour are opportunities to learn more about environmental-related issues, be inspired to tell others and take action to make a difference. And it's more than just a symbol of support - it's a catalyst for urgent change.

"In our daily shuffle, we can take for granted the many services nature provides: the beauty that inspires us and the resources that nurture us. Let's take a moment to rediscover our wonder for the natural world and our gratitude for all it provides. Reconnecting to our curiosity and appreciation for nature can reinvigorate our environmental goals and the movement at large."
